ALUMINIUM ROLLER HOOKS

40 YEARS OF PRODUCT DEVELOPMENT

We process the aluminium for our roller hooks further in a very special way and harden it in a similar way to steel. In this way we achieve a carrier load of up to 500 kg (1,102.31 lbs) for pigs and 1,500 kg (3,306.93 lbs) for cattle and calves. The rollers are made of galvanized steel or stainless steel with maintenance-free stainless steel ball bearings.

Roller hooks size options:

- Roller hook 500kg (~1115 g without bottom part)
- Roller hook 500kg with side hook (~1215 g without bottom part)
- Roller hook 1500kg (~1445 g without bottom part)
- Roller hook 1500kg with side hook (~1610 g without bottom part)

- Casting of maximum carrier load
- Models with and without auxiliary hooks
- Insertion of transponder chips

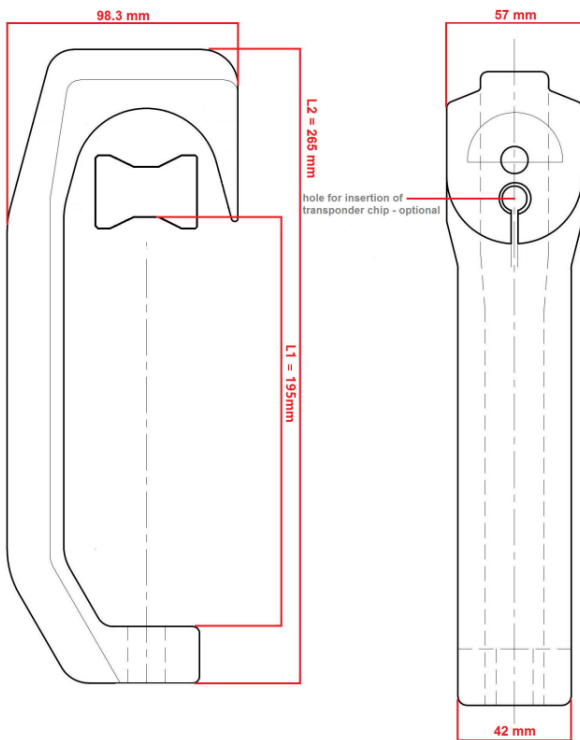

Bottom part is optional according to customer requirements - hook, spreader hook and chain with different diameters, the material used is according to the customer's wishes, as standard we use AISI 304 - food grade stainless steel.

PREMIUM MATERIAL FOR THE BEST RESULTS

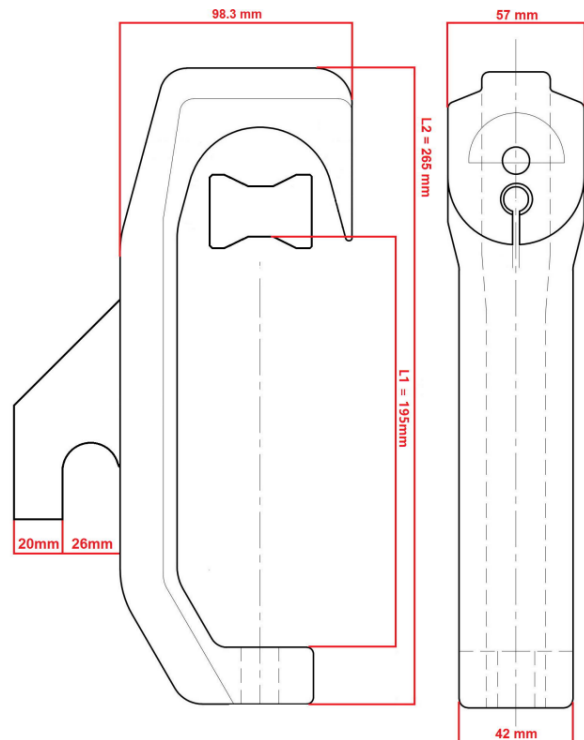

As a leading expert of products for abattoirs we have been developing for years high performance and quality products for small, medium-sized and large abattoir companies. Our product portfolio includes dehairing paddles, cleaning whips and roller hooks which we have developed ourselves. A lot of renowned reference companies from the meat processing industry worldwide are among our satisfied customers.
